Content	Psychological Problems	Sleep and Dreaming	Criminal Psychology
Skills	A01 – Knowledge A02 – Application A03 - Evaluation	A01 – Knowledge A02 – Application A03 - Evaluation	A01 – Knowledge A02 – Application A03 - Evaluation
Key Questions	How do we define mental health? How do we cope with common psychological problems that we experience in everyday life? When do we decide that someone has a mental health issue? How can mental health issues be explained in biological and psychological terms? How have attitudes towards mental health changed in recent years? What are the effects of significant mental health problems on the wider society? What treatments are available for mental health problems and how effective are they? What contribution has neuropsychology made to our understanding of psychological problems?	What are the functions, features and benefits of sleep? What is the sleep cycle and what happens in each stage? How is the brain involved in sleep and dreaming? What are the causes of sleep disorders? How do the different theories of dreaming attempt to explain why we dream and how effective are they in their explanations? How could neurological damage impact sleep? What strategies can we implement to get a better night's sleep?	How do we define criminal behaviour? How is crime measured? How can criminal and anti-social behaviour be explained using psychological and biological theories. What are the limitations of these theories? What are the effects of punishment and deterrents in reducing criminal/anti-social behaviour? How can rehabilitation reduce criminal/anti-social behaviour and increase pro-social behaviour?

Grow and Succeed

High Expectations | Mutual Respect | Quality Learning | Success for All
